ABOUT AHNS

HISTORY OF THE SOCIETY

On May 13, 1998, The American Head and Neck Society (AHNS) became the single largest organization in North America for the advancement of research and education in head and neck oncology. The merger of two societies, the American Society for Head and Neck Surgery and the Society of Head and Neck Surgeons, formed the American Head and Neck Society. The contributions made by the two societies forming the AHNS are significant in the history of surgery in the United States. Dr. Hayes Martin conceived the Society of Head and Neck Surgeons in 1954, a surgeon considered by many to be the “father of modern head and neck tumor surgery.” The purpose of the society was to exchange and advance the scientific knowledge relevant to the surgery of head and neck tumors (exclusive of brain surgery) with an emphasis on cancer of the head and neck. Two years later, The American Society for Head and Neck Surgery was organized with the goal to “facilitate and advance knowledge relevant to surgical treatment of diseases of the head and neck, including reconstruction and rehabilitation; promote advancement of the highest professional and ethical standards as they pertain to the practice of major head and neck surgery; and to honor those who have made major contributions in the field of head and neck surgery, or have aided in its advancement”.

The new Society remains dedicated to the common goals of its parental organizations.

WHY JOIN THE AHNS?

The American Head and Neck Society is an organization of physicians, scientists and allied health professionals dedicated to improving the understanding of Head and Neck Cancer and the care of patients afflicted with that disease. Membership is open to a wide variety of interested individuals in several categories that differ both in terms of responsibility and level of involvement in the society.

AHNS MEMBERSHIP INFORMATION

Applications are now being accepted for consideration in 2014. The deadline for all required documents for 2014 is **October 31, 2014**. For more membership application information, please go to: www.ahns.info/member-central.

AHNS FOUNDATION

Who is the Research and Education Foundation of the American Head and Neck Society?

The Research and Education Foundation is the non-profit foundation arm of the American Head and Neck Society striving to be the largest funder and supporter of head and neck cancer research and education grants.

Presently the Foundation is making great progress on our most immediate goal to assume funding of all grants offered by the American Head and Neck Society. Once this is achieved, the Foundation will turn its focus to expanding the grant and research program so we may become internationally recognized as the leading source for head and neck cancer research funding.

To date, the Foundation has been grown nearly entirely by the support of AHNS members and their great generosity enabling us to fund the Chris O'Brien Traveling Scholar Award and the Young Investigator Award in Memory of Duane Sewell. Thank you! This is a true testament to the Foundation. We—and you—know it is important.

While financial contributions are the most straight-forward way to give and will go directly to supporting our goal or funding one of our current grants, there are other unique ways to give including donations of honorarium, stock or planned gifts.

The Foundation also welcomes partnerships with individuals, industry and foundations who may share a common desire to end head and neck cancer. Please speak with Kelly Honecker to inquire more about such opportunities at kelly@ahns.info.

For more information about the Foundation, or to make your gift today, go to www.ahnsfoundation.info or please come and visit us in the Harlem Room on the 7th Floor in the Centurion Club lounge.

The Foundation extends a special thank you to our Centurion Club Members. A full list of our Centurion Club members can be seen in front of the lounge on the 7th Floor.

ABOUT IFHNOS

HISTORY OF THE FEDERATION

Dr. Jatin P. Shah, of New York, conceived the establishment of an international body bringing together all specialists involved in the care of patients with Head and Neck Cancer worldwide. He presented this thought to the Executive Council of the Society of Head and Neck Surgeons, (SHNS) at its Retreat in the summer of 1985 and sought support from the SHNS. The proposal was received enthusiastically by the SHNS, and he was encouraged to proceed. By August of 1986, leaders of Head and Neck Oncologic Societies worldwide were contacted to explore the feasibility of establishment of an International Federation of Head and Neck Oncologic Societies with the purpose of “establishing channels of communication to enhance exchange of information and improving knowledge as well as exploring new directions in the diagnosis, treatment and rehabilitation of patients with head and neck cancer”. This proposal was enthusiastically received by leaders in the field from various parts of the world, culminating in the formation of a steering committee which met on May 1, 1987, at the Grosvenor House, in London. Representatives of sixteen Head and Neck Organizations from North America, South America, Europe, Africa and Asia were present. The steering committee drafted the constitution and bylaws of the Federation which was subsequently ratified by the Governing Council which consisted of one member from each member organization in the Federation. Dr. Jatin Shah was elected Secretary General by unanimous vote of the Governing Council.

Initial programs of the Federation consisted of enlarging the membership of the Federation with compilation of a newsletter, development of an international directory of members of component member societies and organization of World Congresses. Over the years the Federation has grown with a membership of 43 Head and Neck oncologic organizations, representing 65 countries, from every part of the world. Annual Newsletters were published initially, and these were eventually transitioned into an active and current Web site (www.ifhnos.org). The Federation is able to reach over 5000 specialists, located in nearly every corner of the world, providing care to patients with head and neck cancer through membership of its component societies. The Federation has successfully attained its initial goal and mission of establishing channels of communication to foster camaraderie amongst professionals involved in the care of patients with head and neck cancer.

Quadrennial World congresses of the Federation have been held since 1998, starting with the first World Congress in Mumbai, India in December 1997 under the leadership of Dr. Ashok Mehta. The second World Congress was held in December 2002 in Rio De Janeiro, Brazil under the leadership of Dr. Geraldo Matos D'Sa. The third World Congress was held in Prague, Czech Republic in June 2006 with Dr. Jan Betka as Congress President. The fourth World Congress was held in Seoul, Korea with Dr. Kwang Hyun Kim serving as President. The fifth World Congress will celebrate the Centennial of the Head and Neck Program at Memorial Sloan Kettering Cancer Center in New York in July of 2014. Future congresses of the IFHNOS are planned for Buenos Aires in 2018, and Europe in 2022.

An innovative Global Continuing Medical Education program, "The IFHNOS World Tour", was introduced in 2008, offering a two and half day conference conducted by World leaders in the Head and Neck specialties, over five weeks. This program was offered in eleven countries around the world, beginning with London, Barcelona, Rome, Athens, Warsaw, Moscow, Mumbai, Beijing, Bangkok, Buenos Aires, and ending in Bogota. This highly successful education program was repeated in October 2010, with conferences in, Frankfurt, Antalya, St. Petersburg, Bangalore, Manila, Shanghai and Mexico City. The World Tour 2012 program was offered in Kiev, Amsterdam, Cairo, Ahmedabad, Guangzhou, Jakarta, Brisbane and Sao Paulo. This program will be repeated every two years, in the month of October, at different destinations worldwide.

IFHNOS MEMBERSHIP INFORMATION

Applications for membership by a Head and Neck Society or Association to IFHNOS are accepted by the Secretary-General throughout the year. For membership application information go to **www.ifhnos.org**.

ABOUT MSKCC

Memorial Sloan Kettering cancer center is the oldest, free standing not for profit tertiary care Cancer

Memorial Sloan Kettering
Cancer Center.

Center established in 1884. At the beginning of the 20th century a great and bold step was undertaken by the visionary director of Memorial Hospital for Cancer and Allied Diseases Dr. James Ewing, who saw that surgery for cancer had to be developed into several subspecialties. The Head and Neck Service was the first to be established in the institution, and the first such service in the world, with Henry Janeway as its chief in 1914.

The fundamental concepts of cancer ablative surgery were developed by the pioneering surgeons on this service, and the first half of the last century saw head and neck surgery emerge as a subspecialty of surgical oncology. The role of radical surgery was firmly established and the department became a Mecca for head and neck surgical training. The trainees in this program, who came from many parts of the world, returned to their home countries to develop this specialty. The focus of this program is excellence in patient care, education, training and research. In all spheres of professional and academic activities, the Head and Neck Service of MSKCC, has remained as a world leader in the specialty.

In the third quarter of the last century, multidisciplinary programs were developed with the integration of radiotherapy and chemotherapy with surgery. With the growth of this multidisciplinary specialty, the need for subspecialty trained head and neck surgeons became obvious. A clinical fellowship program was started in 1979. Major advances during this period included development of skull base surgery and mandible reconstruction with the fibula free flap. The last quarter of the century saw major strides in patient care, education, and research. Patient care was streamlined with the development of disease management teams. An integrated fellowship program of clinical and research training was developed, which has been supported by the NCI. Recruitment of new faculty members with a commitment to basic research has become the major strength of the program today. Basic research in molecular biology, genomics, and tumor progression, led by members of the faculty, provides an excellent opportunity for the trainees. The graduates of the training program are leaders in the specialty, not only in the USA but worldwide. The service regularly offers local, regional, national and international continuing education programs.

ABOUT MSKCC *continued*

The hallmark of this service is leadership, and over the years the service has continually provided leaders in head and neck surgery both nationally and globally. The work done in the last century and the accomplishments achieved to date have paved the path for the specialty to grow and to lead the way for future generations of head and neck surgeons, who will scale new heights in the conquest of cancer. Not only their work, which will have an impact on the disease and improve the length and quality of life of the patients we treat, but their leadership will continue to keep this program at the leading edge of the specialty as we enter its second century of existence.

Allan H. “Bud” Selig

Commissioner of Major League Baseball

Allan H. (Bud) Selig was named the ninth Commissioner of Baseball on July 9, 1998, by a unanimous vote of the 30 Major League Baseball club owners. Prior to his election as Baseball’s Commissioner, Selig served as Chairman of the Executive Council and was the central figure in Major League Baseball’s organizational structure dating back to September 9, 1992. Mr. Selig has led the way toward implementation of many of the game’s structural changes, including the expanded Wild Card playoff format, Interleague Play, realignment, restoration of the rulebook strike zone, consolidation of the leagues’ administrative functions and instant replay, which will be available for most types of plays in 2014.

Mr. Selig is guiding the game through a significant renaissance. Major League Baseball set its all-time regular season attendance record each year from 2004-2007, culminating in an all-time high of 79,503,175 fans in 2007. The 2008 season marked the second highest attendance total in history with more than 78.6 million fans. With more than 73 million fans again each year from 2009-2013, the last 10 seasons represent all 10 of the best-attended seasons in baseball history. Revenues have increased more than five-fold, from \$1.2 billion in 1992 to a record total exceeding \$8.0 billion in 2013.

Mr. Selig received many significant honors for his accomplishments, philanthropy and corporate citizenship in recent years including the Jackie Robinson Foundation’s Lifetime Achievement Award in 2010, a statute from the Milwaukee Brewers in Selig’s likeness outside Miller Park in 2010, and in August 2011, the National Baseball Hall of Fame and Museum unveiled the Allan H. (Bud) Selig Center for the Archives of Major League Baseball Commissioners, a permanent research space within the halls of Cooperstown, dedicated in his honor. In September 2012, the Green Sports Alliance presented its first Environmental Leadership Award to Selig; the Natural Resources Defense Council called Selig “the

single most influential environmental advocate in the history of sports.” In June 2013, the Commissioner was the recipient of B’nai B’rith International’s Distinguished Humanitarian Award.

Mr. Selig is a major supporter of his alma mater, the University of Wisconsin-Madison, as well as Marquette University. The University of Wisconsin has named several need-based scholarships and a history department chair in Selig’s honor. Selig, who has taught at Marquette University Law School since 2009, was named to its adjunct faculty as distinguished lecturer in sports law and policy in 2010.

Bud and Sue have three daughters and five granddaughters.

J. Silvio Gutkind, PhD

National Institute of Dental & Craniofacial Research

J. Silvio Gutkind received his PhD in Pharmacy and Biochemistry from the University of Buenos Aires, Argentina. He was trained as a post-doctoral fellow at the NIMH and NCI, and joined the National Institute of Dental and Craniofacial Research (NIDCR), NIH, where he is currently the Chief of the Oral and Pharyngeal

Cancer Branch. Dr. Gutkind is recognized as a leader in the study of signal transduction mechanisms in normal and malignant cell growth. His team has made seminal contributions to the elucidation of the aberrant signaling circuitries driving head and neck cancer progression, including the discovery that most head and neck cancer lesions display persistent activation of the PI3K–AKT–mTOR pathway. His team is now exploiting the emerging information for the development of novel mechanism-based anti-cancer treatment options and preventive strategies. Dr. Gutkind is currently leading a multi-institutional collaborative effort aimed at exploring the clinical benefits of treating newly diagnosed head and neck cancer patients with mTOR inhibitors. He has been the recipient of numerous awards, edited three books, and published over 400 research studies and review articles, and he has played multiple leadership roles as part of editorial boards, national and international advisory committees, and research organizations.

HEAD AND NECK CANCER AND HPV STATUS: NEW INSIGHTS INTO PROGNOSIS, TREATMENT GOALS AND PATIENT CARE

Astor Ballroom 7th Floor

Not planned or accredited for CME by the AHNS

PRESENTERS: Maura L. Gillison, MD, PhD & David I. Rosenthal, MD

PROGRAM OUTLINE: The optimal management of squamous cell cancer of the head and neck (SCCHN) has coalesced around the integrated use of several validated treatment options, including EGFR-targeting therapy, cytotoxic drugs, radiotherapy, and surgery. The emergence of human papilloma virus (HPV) associated head and neck cancers—diseases that have distinct epidemiologic and clinical features—has led clinicians to consider the impact of HPV status on issues such as prognosis and optimal therapy. This breakfast symposium will tackle these and other HPV-themed topics head-on, and offer a glimpse of the cutting-edge science that promises to highlight the increasingly important role of HPV status in the management of SCCHN.

After completing this activity, participants will be able to:

1. Describe the epidemiologic, clinical, and prognostic features of HPV-positive SCCHN patient populations;
2. Recommend appropriate therapy for patients with SCCHN who present with confirmed HPV-positive disease;
3. Summarize safety and efficacy findings according to HPV status from studies testing novel biologic agents in patients with SCCHN, including advanced disease; and
4. Address patient-related health and psychosocial concerns in HPV-positive SCCHN populations.

This activity is accredited by the University Of Florida College Of Medicine for 1.0 CME credits.

This CME activity is jointly provided by the University of Florida College of Medicine and PVI, PeerView Institute for Medical Education and supported by an educational grant from Bristol-Myers Squibb.

NEW APPROACHES TO IMMUNOTHERAPY OF HEAD AND NECK CANCER

Duffy/Columbia 7th Floor

Not planned or accredited for CME by the AHNS

MODERATOR: Gregory T. Wolf, MD, FACS

PROGRAM OUTLINE: It is increasingly recognized that the immune system is a critical factor in the effectiveness of cancer therapies and patient outcomes. Immune defects including T-cell dysfunction, cytokine alterations and antigen presentation defects are present in patients with HNSCC. These discoveries have triggered a growing interest in immunotherapy. If successful, it could improve the results of conventional therapies and potentially avoid the toxic side effects plaguing the current management of HNSCC. New agents and promising experimental approaches including therapeutic antibodies, checkpoint blockade, dendritic cell vaccines, regulatory T lymphocytes and cytokines will be discussed. These advances could expand future therapy options.

CME EDUCATIONAL OBJECTIVES

EDUCATIONAL OBJECTIVES

The conference is designed to facilitate discussion on “best practices” in the diagnosis, treatment, and rehabilitation of head and neck cancer patients throughout the world.

The participation of Medical Oncologists, Radiation Oncologists, Radiologists, Pathologists and Head and Neck Surgeons will ensure educational interaction within and between specialties that can strengthen multi-disciplinary collaborative relationships.

At the conclusion of the event, participants will be able to:

A. Discuss current therapeutic options for the head and neck cancer patient in a multidisciplinary environment, including:

1. List the ways that induction chemotherapy and concurrent chemoradiotherapy impacts oncologic and functional outcomes of patient with advanced head and neck cancer.
2. Compare the benefits and shortcomings of treating head and neck cancer patients with radiation delivery methods such as Intensity Modulated Radiotherapy or altered fractionation approaches.
3. Critique the existing and potential roles of novel molecular-targeted agents in the treatment of head and neck cancer.
4. Explain the role of functional imaging modalities in pre-treatment staging and assessment of treatment response.
5. Describe the changing role of the surgeon in patients treated with primarily nonsurgical means.
6. Review the impact of new breakthroughs in surgical technology including: 1) robotic surgery, 2) endoscopic approaches to the neck and thyroid gland, 3) image guided treatment of skull base neoplasms, 4) sentinel node mapping, 5) new reconstructive approaches, 5) new powered instrumentation and hemostatic devices.

CME EDUCATIONAL OBJECTIVES *continued*

B. Summarize emerging research breakthroughs that are helping us to better understand the pathogenesis of head and neck cancer that will translate into improvements in the diagnosis, prognostication, and treatment of the head and neck cancer patient, including:

1. Novel high throughput laboratory approaches to analyze tumors and biofluids including whole genome sequencing, cDNA microarrays, array CGH, SNP arrays and integrative genomics.
2. Animal models of head and neck cancer.
3. The significance of human papilloma virus elements and or antibodies in tumors and biofluids.
4. Pre-clinical evaluation of novel therapeutics.
5. Early detection of oral pre-malignancy and cancer and chemopreventive approaches.
6. The use of biomarkers in treatment selection.

C. Recognize the vital role of nurses, speech pathologists, audiologists, nutritionists, social workers, pain specialists, mental health practitioners, physical therapists, dental oncologists in achieving maximal functional outcomes and proper functional assessment and reporting of functional results of new treatments programs.

D. Describe the emerging emphasis in medicine on the quality, comparative effectiveness, and costs of health care delivery. Attendees will be able to discuss the following:

1. The use of treatment guidelines including the NCCN treatment guidelines and adherence to treatment guidelines as a quality measure.
2. How to establish a surgical quality and performance monitoring program.
3. The impact of volume on quality of head and neck cancer care.
4. The Physician Quality Reporting Initiative (PQRI) in head and neck cancer care.
5. Incorporating quality into trainee/medical student education.
6. The burden of Head and Neck Cancer in the developing world, and the challenges facing the international community.
